Setup Instructions for Prospective Clients

Microsoft 365 / Intune security and device posture snapshot

This report is a point-in-time, automated summary generated from data available via Microsoft Graph at the time of generation. It is provided as an informational snapshot to support your own evaluation and is not a comprehensive security audit, a compliance certification, or a guarantee of your organisation's security posture. Integricity Technology accepts no liability for decisions made on the basis of this report. This report and the underlying data it was generated from will be securely destroyed within 30 days of generation. For a full assessment and remediation plan, contact us to discuss an engagement.

Overview

This one-time report reads security, device, and compliance data from your Microsoft 365 tenant using Microsoft Graph, and produces a branded PDF summary. It requires about 10 minutes of setup by whoever holds Global Administrator (or Privileged Role Administrator) access in your tenant.

1. Register an app in Entra ID

- Entra admin center > App registrations > New registration
- Name it something like "Integricity IT Snapshot" - single tenant
- Note the Application (client) ID and Directory (tenant) ID shown on the overview page

2. Grant the required API permissions

Add these 12 as Application permissions (not Delegated):

- DeviceManagementManagedDevices.Read.All
- DeviceManagementConfiguration.Read.All
- DeviceManagementApps.Read.All
- Policy.Read.All
- SecurityEvents.Read.All
- IdentityRiskyUser.Read.All
- AuditLog.Read.All
- User.Read.All
- Reports.Read.All
- Organization.Read.All
- Group.Read.All
- RoleManagement.Read.Directory

After adding these, click Grant admin consent - this step requires Global Admin. Missing even one of these will cause the corresponding section of your report to come back empty rather than fail outright, so it is worth double-checking all 12 show a green consent tick before continuing.

3. Create a client secret

- Certificates & secrets > New client secret
- Set the expiry to 7 days - you won't need it longer than that, and a short-lived secret limits your exposure
- Copy the secret value immediately (it is shown only once)

4. Run the report

- Send your Tenant ID, Client ID, and Client Secret to your Integricity contact, who will generate the report for you
- Nothing you provide is stored, logged, or reused - it is used only to make this one request and then discarded
- Your PDF report is typically ready within a few minutes

Important: send the Client Secret separately from the Tenant ID and Client ID, through a secure channel - for example a password manager sharing link, an encrypted note, or read aloud over a phone call - never in the same email, chat message, or document as the other two values. Anyone who obtains all three together can access your tenant's data for as long as the secret remains valid, so keeping them apart in transit matters even though the exposure is short-lived.

5. Clean up afterward

- Once your report has been generated, delete the app registration (or at minimum revoke the client secret) in Entra ID
- This closes off the read access you granted - it is not needed again unless you request another report

Questions or issues during setup?

Contact your Integricity Technology representative - we are happy to walk through it live if that is easier.
